

Martello Folding Chair

MedViron's Martello Folding Chair was designed for hospital patient rooms to serve as a convenient, additional seat. The chair is lightweight, and comes with a hanger bracket that allows it to be hung securely on walls, the side of cabinets, or behind doors when not in use. This feature maximizes space and contributes to a clutter-free patient room.

The chair may also be used throughout the hospital in other areas, such as Emergency and MRI departments.

Durability and Longevity

The Martello Folding Chair is manufactured using HDPE which is highly resistant to moisture, impact, and chemicals, making it ideal for hospital furniture that must withstand frequent cleaning and heavy use. HDPE is non-porous, meaning it doesn't absorb liquids, which may assist Environmental Service staff with infection prevention. HDPE's longevity reduces the need for frequent replacements, cutting down on material waste and overall resource consumption. HDPE is also recyclable.
